

TREATMENTS

Dermaplaning

Dermaplaning is a manual exfoliation treatment for the face that instantly removes the outer most layers of dead skin cells and unwanted facial hair. The procedure is also effective in eliminating the skin's fine lines, wrinkles, and surface scars. The results are immediately visible in the skin's smooth, supple, and vibrant appearance. Dermaplaning is a safe and effective way to quickly rejuvenate your face by ridding it of the hindrances that block your natural beauty.

Transformation Peel

This three-step peel is designed to remove the maximum amount of dead skin cells in the top layer of skin, without any down time. Just below the surface lies a fresher and younger-looking face. When done regularly, this peel will aid in increasing skin thickness, refine appearance of wrinkles, and even tone and texture. It improves the hydration and efficacy of the products available for you to use at home. The Transformation Peel takes approximately one hour, and your skin will look pink for about twenty minutes following the procedure.

TCA Chemical Peel (trichloroacetic acid)

This light to medium chemical peel is a treatment that greatly improves the skin's appearance by eliminating its' damaged outer layers. TCA peels are perfect for treating fine lines and wrinkles, sun damage, uneven skin pigmentation, acne scars, superficial blemishes, and other skin flaws on the face, neck, and hands. The results are experienced in about a week, when the clarity, vitality, and smoothness of your skin are beautifully enhanced.

Permanent Make-up

Intradermal Pigmentation is a revolutionary method of applying micro insertions of natural pigments into the dermal layer of the skin. This state of the art technique is medically proven and specifically designed to be completely safe. Intradermal Pigmentation is used for a variety of permanent cosmetic enhancements such as vitilgo, stretch marks and scar camouflage, areola restoration, hairline enhancement and more.

Lip Liner/Color

The Intradermal Pigmentation procedure for lip color is beautiful. It can appear to change the size and shape of the lips as well as the color. This procedure helps prevent lipstick from bleeding into the surrounding skin. A soft pink, similar to the lip color of a newborn baby, is popular for those wanting a natural look. A more dramatic color can be achieved if desired.

Eyebrows

The Intradermal Pigmentation procedure for eyebrows can mimic the appearance of hair in the brow line. Anyone who desires more fullness of the brows will love the procedure and the time saved not applying makeup. Those who used to apply pencil can go swimming, play tennis or wipe their forehead without the embarrassment of losing their eyebrows. Alopecia sufferers are pleasantly surprised at how natural it looks.

Eyeliner

A subtle, natural look, mimicking thousands of tiny eyelashes with the implantation of pigments in the lash line is popular with both male and female clients. Additional shadowing of color can be added for a soft natural liner or a more bold, definite line can be achieved. Ophthalmologists recommend Intradermal Cosmetic procedures for those who are allergic to conventional makeup and for those wearing contact lenses.

DEFY AGE, DEFINE BEAUTY.

Intracuticals Hyperbaric Oxygen Treatments

This cutting edge, scientific breakthrough is the latest, most naturally effective discovery in the continual search for the "Fountain of Youth". Many Hollywood celebrities, like superstar Madonna, rely on oxygen as a way to naturally maintain their skin's young and vibrant look. Intracuticals has developed a special serum that, combined with the pressure of Hyperbaric Oxygen is infused into the skin to bring out its' Hyaluronic Acid, the natural, youthful component that decreases over time. Imagine a baby's skin – smooth, soft, and fresh. Hyaluronic Acid is responsible for this untarnished moisture. Infusing Oxygen, along with essential vitamins and antioxidants found in the serum, richly replenishes the skin. New and healthier cells are revived while harmful toxins are reduced. This process happens simultaneously as the Oxygen cools and calms the skin, an overall pleasant and relaxing experience. The results are instant, with deeply hydrated, refreshed, brightened and glowing skin that keeps improving as the days progress. Intracuticals' Hyperbaric Oxygen Treatments prove that painful needles and grueling procedures are no longer necessary to achieve maximum results with healthy, age-defying, naturally beautiful skin.

Every Oxygen treatment produces positive and immediate results, but there are several options to choose from, depending on the needs of your skin and your personal preference.

Choose an oxygen facial

Rejuvenate Hydrating Infusion Oxygen Facial, 60 minutes

This Hyperbaric Oxygen skincare treatment is a wonderful and unique way to deeply hydrate the skin, leaving it firm, fresh, and radiant. The Rejuvenate Serum that is infused with oxygen into the skin contains a new lightweight form of Hyaluronic Acid that instantly hydrates and revitalizes the skin. Skin-protecting Vitamins C and E, as well as Green Tea, are included in the Rejuvenate treatment to aid in the skin's maximum health and hydration. The results appear immediately by the skin's increased firmness, reduced fine lines and wrinkles, improved facial contours, and overall vibrant look. The Rejuvenate Hydrating Infusion leaves skin feeling instantly renewed.

Opulence Brightening Infusion Oxygen Facial, 60 minutes

This Hyperbaric Oxygen skincare treatment is an excellent way to brighten your skin, giving it an overall radiant and younger glow. The infusion treatment includes an Opulence Serum that, in addition to the lightweight form of Hyaluronic Acid, contains Alpha Arbutin and Vitamin C, natural, botanical skin brighteners that leave the face smooth and shining. Uneven skin pigmentation is greatly improved while fine lines, wrinkles, and blemishes are decreased. The Opulence Brightening Infusion is an instant and natural way to reveal the skin's ultimate luminosity with a healthy, vibrant glow.

Choose add-ons
for your oxygen facial

With Atoxelene Infusion add-on, 120 minutes total

Meet Atoxelene – the latest breakthrough alternative to anti-wrinkle injections. Similar to Botox, it is one of the most effective wrinkle reducing treatments available. The Atoxelene Serum contains Argirelene, the natural peptide that targets wrinkles by softening and smoothing facial expression lines. Your skin is immediately firmer, tighter, smoother, and incredibly refreshed. Atoxelene is an advanced and painless age-defying treatment.

With Glycolic and Microderm add-on, 120 minutes total

Glycolic and Microderm treatments can be added to the Rejuvenate Hydrating or Opulence Brightening Infusion for an additional \$100. This is an excellent way to rid the skin of old, dry, damaged surface skin cells in preparation to receive your Hyperbaric Oxygen Infusion of choice. Depending on the condition of your skin, this treatment will give your skin the exact boost needed for the Oxygen Infusion to work more efficiently.

With Glycolic and Microderm plus Atoxelene add-on, 120 minutes total

Neck and Chest add-on, 150 minutes total

The aforementioned treatments are targeted to the face, but can be applied to the neck and chest. The instant and amazing effects will significantly rejuvenate and brighten your neck and chest areas.
